

ASP Internet Subscription Service

The ActionMessage Internet Service is ideal when you need advanced email marketing services, but want to outsource the network and technical support.

Getting Started

Getting started is easy with ActionMessage. Just fill in the online form at www.ActionMessage.com/signup.html and within one business day your account will be activated. No software to install or upgrade - ever!

You will benefit from having dedicated network and email engineers just an email or phone call away, focused solely on supporting your email marketing campaigns.

Our high-speed data center has Gigabit per second Internet fiber backbone connectivity, for quick email campaign delivery.

Deliver email marketing campaigns, manage recipient lists and view detailed reports over the Internet with any web browser.

Hosted in our own high-speed Gigabit data center, the ActionMessage system is available securely using industry-standard SSL encryption. Your company receives its own account with a unique login for each employee. An optional campaign workflow approval process is available according to employee privileges.

ActionMessage has the right service for your requirements:

* Homepage Edition

For web sites needing to capture double-optin email addresses and deliver email newsletter campaigns.

* Commerce Edition

For companies with medium-size opt-in email lists.

* Enterprise Edition

For companies with large opt-in email lists who need database integration or professional services.

* Agency/ISP Edition

For creative/PR agency and ISP resellers who need subaccount and billing features.

* Email Marketing Appliance

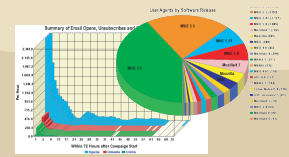

For companies and federal systems with special privacy and security requirements. Install our rack-mounted server appliance in your data center.

Reports are available in several formats, including HTML, Excel, CSV, voice, bar charts and pie charts.

The software is fully internationalized, so you only need one provider for your global branch offices, reducing training and deployment costs.

Gigabit Per Second Network!
